

David J. Ores, MD
GENERAL PRACTITIONER

Laser Tattoo Removal Aftercare Instructions

A healing cream and dressing will be applied to the treated area, which you need to leave on for 24 hours post treatment.

You will need to avoid all exposure to sunlight and ultraviolet light until your laser treatment is totally completed.

Use a number 30 SPF sun block lotion everyday regardless of the weather.

Gently wash the area as described above, twice a day. If you any aftercare questions or concerns, please contact Dr. Ores and we will be happy to help you.
